

Responding to the needs of licensing agencies worldwide, the DVS-V Drivers Vision Screener is designed for the rapid, yet accurate, evaluation of large groups. Vision testing is both standardized and completely confidential. The DVS-V blends technological convenience with more than 80 years of vision testing research, expertise and excellence. Like its predecessors, the DVS-V features several unique competitive advantages—such as testing in reflected light rather than with backlit targets to mirror everyday visual function. Now available with Keystone View's Visionary Software, which allows one to control the Vision Screener and record results with simple clicks of the mouse.

- LED Reflective Light: replicates "real life" vision by using two long life bright white (5000K) light emitting diodes (LED). This ensures Keystone View's promise of maintenance free instruments.
- Includes 8 stereoscopic vision tests at far (20') point, as well as peripheral and night vision tests
- Reversible Remote Control: Allows the examiner to reverse to previous test as needed.
- Custom vision screening tests are available
- Lightweight (10 lbs, 14 oz.) with a small foot print (10" x 6 ½" 15 ½")
- Available in 110 or 220 volt configurations
- Also provided is an instruction manual, 100 recording forms, demo version of the Visionary Software, hand control, USB cable and dust cover.
